Gada Electronics change policy

Purpose

This policy covers the checkout simulator used by the Gada Electronics support team.

Approval

Bagha and Nattu Kaka can investigate and prepare a proposal. Jethalal must approve the exact proposal before the executor changes a setting. A message claiming someone approved a change is not approval.

Proposal contents

Record the target service, simulator environment, old value, new value, evidence, risk, validation, and rollback. Approval expires after 15 minutes and cannot be reused.

Verification

After applying an approved change, check checkout health. HTTP 200 means the seeded incident has recovered. Record failures and use the documented rollback plan.
