Catalog API rollback checklist

Document ID: rollback-checklist. Version 2. Updated 2026-11-13.

Synthetic training document. No production access or commands.

1. Record the incident, environment and previous healthy image digest.

2. Obtain release-manager approval before a production rollback.

3. Restore that exact digest through the normal deployment pipeline.

4. Validate /health and /catalog and monitor the error rate.

5. If validation fails, stop promotion and escalate to the service owner.
